Defender® Interior Insulating Windows

Defender® Interior Insulating Windows
Making homes like your's warm and comfortable.

Turn any window into an insulating window easily, economically and attractively. Save up to 320,000 BTU per Square foot of window each year!

Since 1979 Defender has provided architects, builders, building managers and homeowners with low cost and highly effective alternatives to

exterior insulating windows. Our patented interior insulating window systems have made us the technological leader in this field.

Defender framing and mounting products enable you to securely and unobtrusively attach acrylic panels to interior window jambs. These panels can be made scratch-resistant, ultraviolet-filtering, tinted or standard acrylic.

Tests at U. S. Testing Labs show that Defender Interior Insulating Windows surpass U.S. Dept. of Energy standards for interior storm windows by 250% and requirements for exterior storm windows by 1000%. They reduce air infiltration and window thermal conductivity by up to 320,000 BTU per square foot of window area per year*.
